

# Play it safe...

## with your device!

Devices help us stay connected, but follow these tips to stay safe:

- Lookout for exposed wires or a damaged cover on your charger or cord.
- To prevent your device from overheating, don't place anything on top of it while it's charging.
- If your charger or cord is damaged, dispose of it and replace it with one that is suitable for your device and complies with Australian standards.
- Don't sleep with your phone under your pillow, it can overheat and cause a fire.
- Your charger isn't waterproof – keep it dry.
- Don't hold your phone, or use headphones plugged into the phone, while it is charging.
